

WHAT IS CLAIMED IS:

Sub
A

1. A schedule display control device comprising:
a layout control device forming a layout of a schedule table based on a schedule quantity of a plurality of display units; and
a display control device controlling display of the schedule table according to the layout.

2. The schedule display control device according to Claim 1, wherein:
the schedule table comprises rows and columns, and
the layout control device forms the layout to adjust a size of rows and/or columns corresponding to the schedule quantity.

Sub
B1

3. The schedule display control device according to Claim 1, wherein:
the schedule quantity is a space required for a schedule in a row or a column with a largest number of items and/or the schedule requiring a largest display area, and
the layout control device forms the layout such that each display unit with the largest number of items and/or the schedule requiring the largest display area is displayed.

4. The schedule display control device according to Claim 1, wherein the display control device outputs data controlling the schedule table and the schedule display to a file of a format interpretable by another processing platform.

Sub
A3

1 5. A schedule display control method which controls the display of a schedule
2 table, wherein said schedule display control method comprises:
3 controlling a layout of a schedule table based on a schedule quantity of a plurality of
4 display units; and
5 displaying the schedule table using the layout.

1 6. The schedule display control method according to Claim 5, further comprising:
2 forming rows and columns in the schedule table; and
3 adjusting a width of each row and/or each column corresponding to the schedule
4 quantity.
5

Sub
B1

1 7. The schedule display control method according to Claim 5, further comprising:
2 computing the schedule quantity from a display content quantity of the schedule in each
3 row or each column with the largest number of items and/or the schedule requiring a largest
4 display area; and
5 displaying the schedule requiring the largest display area.

1 8. The schedule display control method according to claim 5, further comprising
2 outputting the schedule table and the schedule display to a file of a format interpretable by
3 another processing platform.

Sub
A¹
of:

9. A computer-readable storage medium storing software performing the process

of:

controlling a layout of a schedule table based on a schedule quantity a plurality of

display units; and

displaying the schedule table using the layout.

10. The computer readable storage of claim 9 further comprising:

forming rows and columns in the schedule table; and

adjusting a width of each row and/or each column corresponding to the schedule

quantity.

Sub
B¹

11. The computer readable storage medium of claim 9 further comprising:

computing the schedule quantity from a display content quantity of the schedule in each

row or each column with the largest number of items and/or the schedule requiring a largest

display area; and

displaying the schedule requiring the largest display area.

12. The computer readable storage medium of claim 9 further comprising outputting

the schedule table and the schedule display to a file of a format interpretable by another

platform.

Sub
A⁵

13. A schedule display control device comprising:

a layout device dividing a calendar period into a plurality of display units containing information, said display units formed in rows, and adjusting a length of the display units of each row to match the display unit in a respective row containing a largest size of information; and

a display device displaying the display units with their corresponding information inside.

14. A schedule display control device comprising:

a layout device dividing a calendar period into a plurality of display units containing information, said display units formed in columns, and adjusting a width of the display units of each column to match the display unit in a respective column containing a largest size of information; and

a display device displaying the display units with their corresponding information inside.

15. A schedule display control device comprising:

a layout device dividing a calendar period into a plurality of display units containing information, said display units formed in rows and columns;

said layout device adjusts a length of the display units of each row to match the display unit in a respective row containing a largest size of information;

said layout device adjusts a width of the display units of each column to match the display unit in a respective column containing a largest size of information; and

a display device displaying the display units with their corresponding information inside.

16. A schedule display method comprising:
dividing a calendar period into a plurality of display units containing information, said display units formed in rows;
adjusting a length of the display units of each row to match the display unit in a respective row containing a largest size of information; and
displaying the display units with their corresponding information inside.

17. A schedule display method comprising:
dividing a calendar period into a plurality of display units containing information, said display units formed in columns;
adjusting a width of the display units of each column to match the display unit in a respective column containing a largest size of information; and
displaying the display units with their corresponding information inside.

18. A schedule display method comprising:
dividing a calendar period into a plurality of display units containing information, said display units formed in rows and columns;
adjusting a length of the display units of each row to match the display unit in a respective row containing a largest size of information;
adjusting a width of the display units of each column to match the display unit in a respective column containing a largest size of information; and

displaying the display units with their corresponding information inside.

19. A computer readable storage media storing a schedule display process comprising:

dividing a calendar period into a plurality of display units containing information, said display units formed in rows;

adjusting a length of the display units of each row to match the display unit in a respective row containing a largest size of information; and

displaying the display units with their corresponding information inside.

20. A computer readable storage media storing a schedule display process comprising:

dividing a calendar period into a plurality of display units containing information, said display units formed in columns;

adjusting a width of the display units of each column to match the display unit in a respective column containing a largest size of information; and

displaying the display units with their corresponding information inside.

21. A computer readable storage media storing a schedule display process comprising:

dividing a calendar period into a plurality of display units containing information, said display units formed in rows and columns;

adjusting a length of the display units of each row to match the display unit in a

6 respective row containing a largest size of information;
7 adjusting a width of the display units of each column to match the display unit in a
8 respective column containing a largest size of information; and
9 displaying the display units with their corresponding information inside.

[illegible]
